

The National Auto Sport Association, Southeast Division, was at Road Atlanta for the June 18-20 weekend for HPDE, Sprint races, Time Trials and more. NASA is dedicated to organizing and promoting racing activities for both the aspiring or accomplished racer. Membership in the National Auto Sport Association will make you part of a large family of motorsports enthusiasts and will provide you many benefits such as being able to participate in NASA events across the county, free admission to most NASA events, and participation in other programs available to our members. Here's some brief info on what NASA does, below. For more information, visit www.nasa-se.com.

HPDE: If you are interested in learning the basics of High Performance Driving, or simply want to drive your car on a racetrack in a controlled and professionally staffed environment, then HPDE is for you. HPDE gives drivers a chance to test their skills and learn from NASA's cadre of experienced instructors in a venue designed for safe and spirited driving far away from the risks present on the street.

Time Trial: NASA's Time Trial (TT) program offers drivers a chance to compete against the clock and to achieve the quickest lap times on many of the country's best known race tracks. TT classes are determined using a system that initially assigns a base class to a car and then changes it into a different class based on modifications done by the owner.

Competition Racing: If you are interested in wheel-to-wheel racing, then our competition racing program is for you. NASA has created racing programs that accommodate all sorts of popular vehicles with rules that encourage aftermarket modifications. NASA has a class for almost any type of vehicle ranging from Production Sedans, Stock Cars, and Formula Cars. If you do not possess a competition license, NASA has programs that will allow you to participate in a racing school to become qualified for racing.
